

Your neighbourhood, on the map.

Complete guide for residents, service teams and moderators

See it. Report it. Follow the response.

LIVE AT:

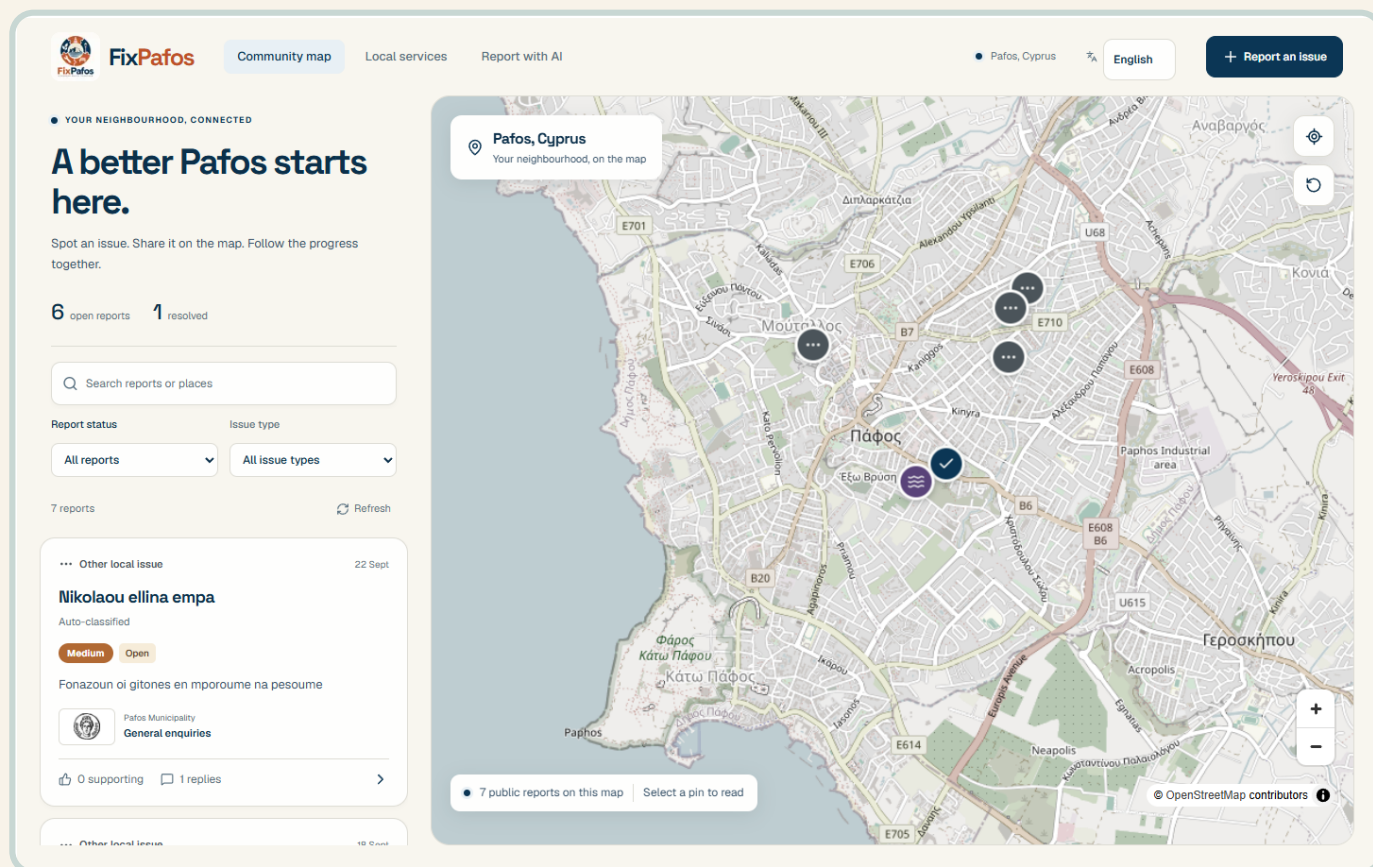

<https://fixpafos.vercel.app>

Updated 29 September 2026 / Experimental chat reporting / AI-generated logo

Independent community platform. Reports are not sent to authorities automatically.

Start with the community map

Open the site in a browser on a phone or computer. No account is needed to browse, report, support or reply.

Live desktop view: board at left; Pafos map and public pins at right.

1 Browse

Open a report from the list or select its pin on the map. Both lead to the same issue detail.

2 Find

Search a place or report text. Narrow the board by status and issue type. Use Refresh for recent updates.

3 Contribute

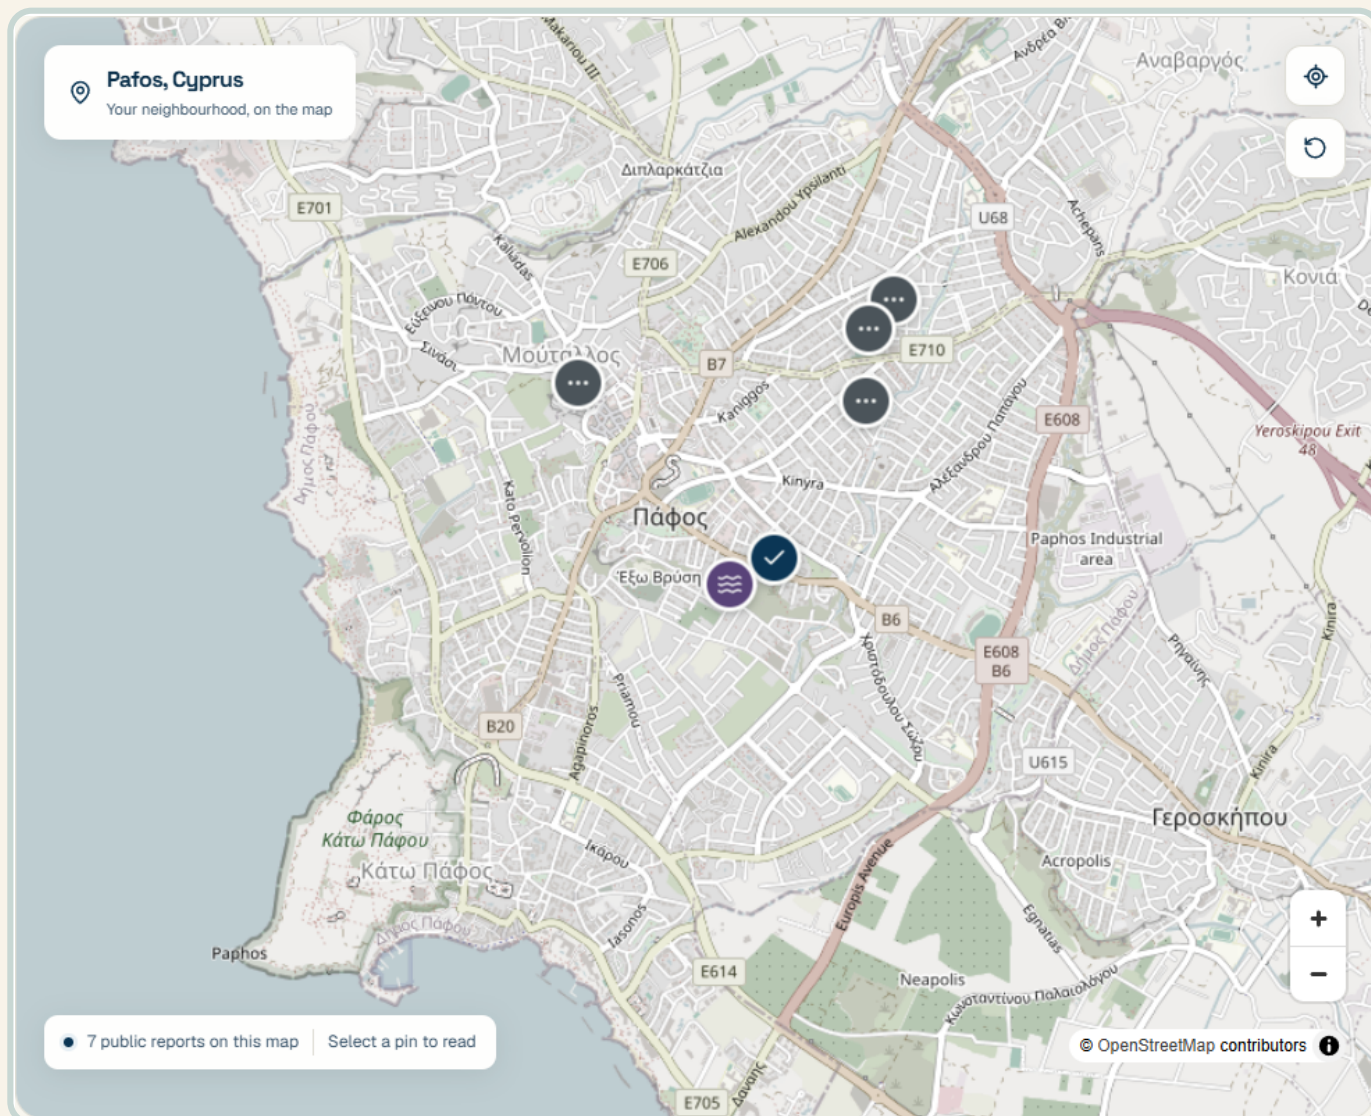

Use Report an issue for the standard form or Report with AI for the experimental chat. On an existing issue, support it or add a public reply.

Three language choices

The language selector offers Greek, English and Russian. It changes interface labels; a resident's original report text is preserved.

Read the map

FixPafos opens over Pafos and displays the public reports currently shown on the board.

Each symbol marks an issue type; a check marks a resolved report. OpenStreetMap attribution stays visible.

1 Select a pin

Tap or click any pin to open the report and focus the map on its location.

2 Move around

Drag to pan; use the + and - controls to zoom. Reset Pafos map returns to the city view.

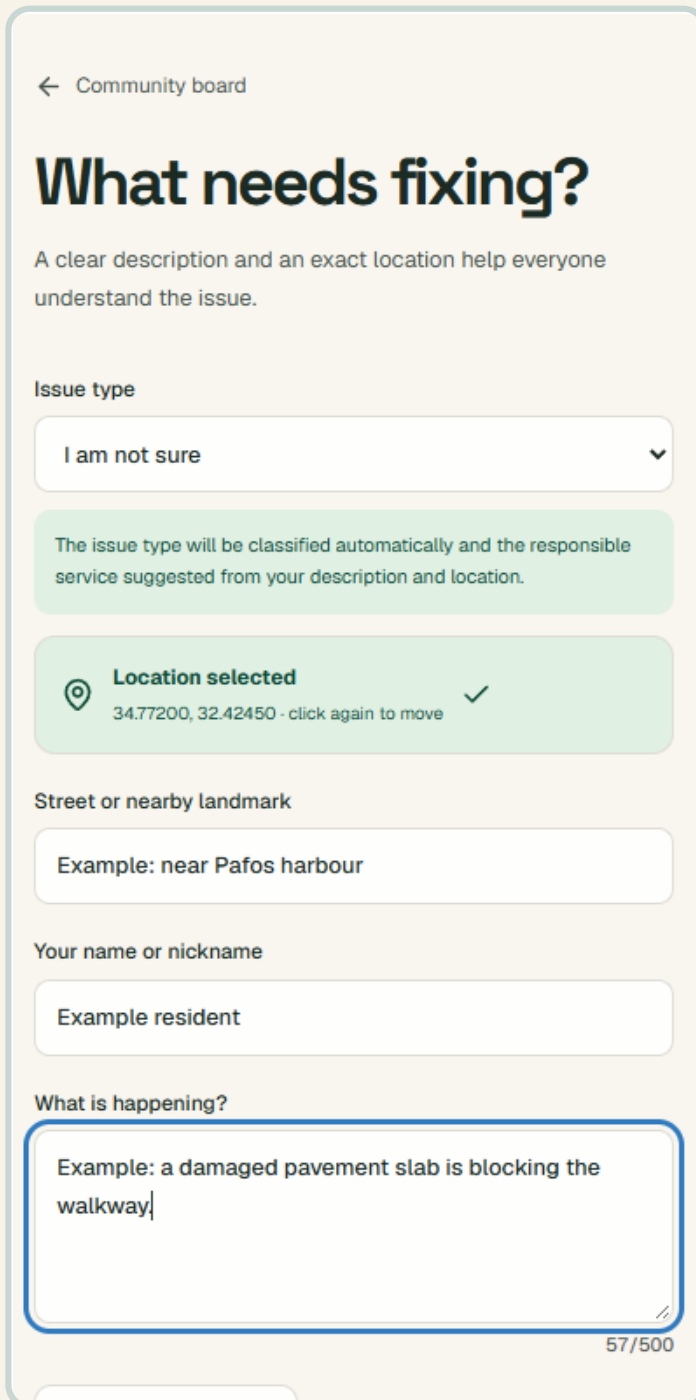

3 Use your location

Allow browser location access to centre the map near you. If location is unavailable or outside Pafos, choose a point manually.

The report list is the text alternative to the map. Load more reports, when shown, adds another page to the list and map.

Publish a new issue

This screenshot is an example draft only. The form was not submitted for this guide.

Example draft: type, pin, landmark, nickname and description.

1 Start

Select Report an issue from the top bar.

2 Choose a type

Pick one of eight categories. Choose I am not sure and the system will classify the type from your description and location.

3 Place the pin

Tap the exact map spot, or pan and use Use map centre. You can move the pin by choosing again.

4 Describe it

Add a nearby street or landmark, your public name or nickname, and a clear description. The description allows up to 500 characters.

5 Publish

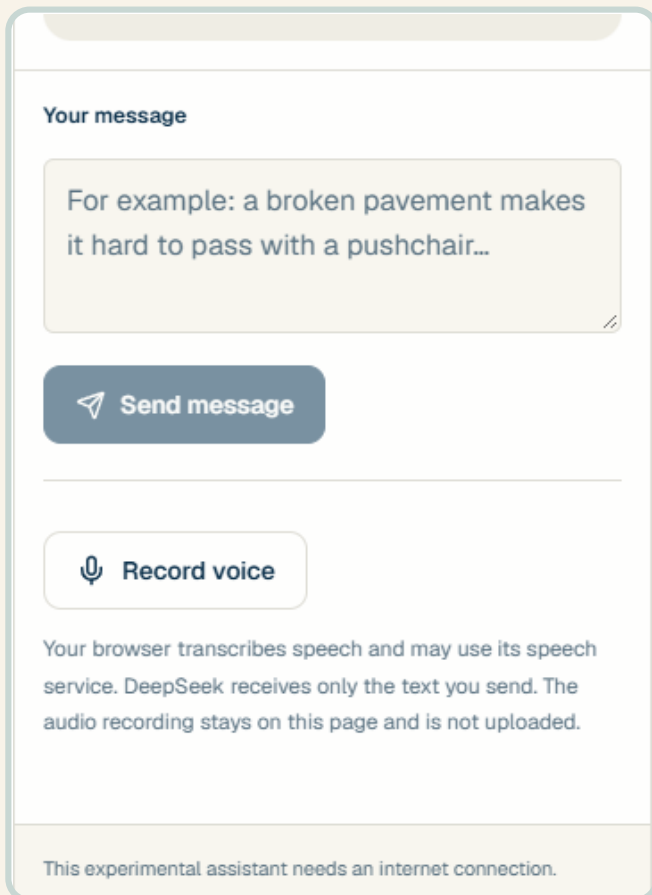

Review your details, then select Publish report. A successful report opens on the public board.

Before you submit

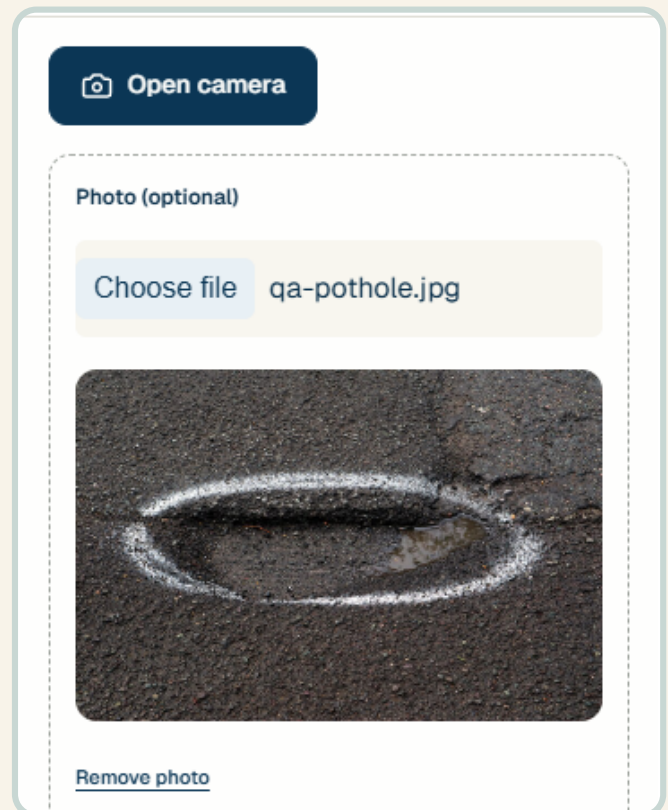

Your name, location and description become public. Leave out phone numbers, private addresses, faces and other personal details.

Report through a conversation

Open Report with AI from the navigation or the standard form. The assistant supports Greek, English and Russian.

The screenshot shows a mobile app interface for reporting a message. At the top, it says "Your message". Below this is a text input field containing the example text: "For example: a broken pavement makes it hard to pass with a pushchair...". To the right of the text is a small icon of a speech bubble. Below the text field is a blue button with a paper plane icon and the text "Send message". Below the button is a rounded rectangle containing a microphone icon and the text "Record voice". Below this is a paragraph of text: "Your browser transcribes speech and may use its speech service. DeepSeek receives only the text you send. The audio recording stays on this page and is not uploaded." At the bottom of the screen, there is a small text line: "This experimental assistant needs an internet connection."

The screenshot shows a mobile app interface for adding a photo. At the top, there is a blue button with a camera icon and the text "Open camera". Below this is a dashed box containing the text "Photo (optional)". Inside the dashed box, there is a light blue button with the text "Choose file" and a light yellow button with the text "qa-pothole.jpg". Below these buttons is a photograph of a pothole in a road. Below the photograph is a blue button with the text "Remove photo".

Open camera or upload a photo. This example image is illustrative and was not published.

Live mobile controls: type a message, send it, or record voice. The assistant then asks follow-up questions.

1 Describe what happened

Type or speak what you noticed. DeepSeek asks about timing, extent and impact, then prepares a draft. Continue with this draft when ready.

2 Record and check your words

Select Record voice and allow microphone access. Stop to replay the recording and edit the transcript; Use this text adds it to your message. The browser transcribes speech. DeepSeek receives the text you send, not raw audio.

3 Add a photo safely

Choose Open camera, allow access and select Take photo, or upload a JPEG, PNG or WebP up to 4 MB. Use this photo continues; Continue without a photo skips it.

Experimental and online

The chat needs an internet connection. Unfinished conversation and audio stay in page memory; leaving or reloading discards them. Browser voice transcription varies by browser and may use its speech service.

Choose the place, then review

The chat collects a location and public display name before presenting an editable report. This example draft was never submitted.

Use GPS

Choose on map

GPS is your current position, which may differ from the issue's location. Check the pin before continuing.

Selected coordinates: 34.77200, 32.42450

Street or nearby landmark

Use GPS when you are at the issue, or choose the actual spot on the map.

Draft prepared with AI - please check it

Report description

A large pothole on a public road beside the pavement, noticed yesterday. It causes cyclists to swerve. No injuries reported.

124/500

Public display name

Example resident

Street or nearby landmark

Example draft - Pafos town centre

 34.77200, 32.42450

A labelled AI draft can be corrected before publication. Name, landmark and photo are also reviewable.

1 Confirm the issue's location

Use GPS only if you are there. Check the pin and accuracy, or tap the map or use Use map centre. Add a street or landmark and choose Confirm this location.

2 Choose a public name

Enter your name or nickname, then select Review my report. Do not add private contact details.

3 Edit, then submit

Read and correct the 500-character draft, photo and location. Change photo, Change location and Back to the conversation allow revisions. Only Submit report sends the report.

The same publication checks

Submission uses existing moderation, department classification, severity, duplicate checks and photo review. Pending photos stay private. The chat drafts from text; photo review occurs after submission.

Try it live: <https://fixpafos.vercel.app/report/chat>. If a permission is denied, type instead, choose a photo or use the map. The standard form retains its offline queue.

Photo, dictation and offline drafts

A report can include one optional photo. The standard form supports dictation and offline queuing; experimental chat needs a connection.

 **Dictate report**

Check and correct the text before submitting. Nothing is submitted automatically.

Photo (optional)

Choose file qa-pothole.jpg

Remove photo
JPEG, PNG or WebP, up to 4 MB. Your photo is checked automatically against the report. Clear, relevant and safe photos are approved automatically; others stay private for moderator review. Avoid faces, number plates and personal information.

Browser photo preview; sample image was never published.

Add a photo

Choose a JPEG, PNG or WebP up to 4 MB. Review the preview or Remove photo before submitting.

Photo review

Location metadata is removed. Clear, relevant, safe images can be approved automatically. Uncertain or sensitive images stay private for moderator review.

Dictate report

If your browser offers speech recognition, tap Dictate report. Stop when finished, then read and correct the text. Dictation never submits for you.

Offline queue

If a network failure prevents submission, the report and optional photo stay on this device as Not submitted yet. The board offers Retry and Discard; it retries when connectivity returns.

Publication state

A pending photo is not public. Its report may be visible while the image waits. If a report is blocked by text moderation, neither the report nor its photo is published.

Understand a report

Open a card or map pin to see its status, message, suggested service and community updates.

[← All reports](#)

Not sent to the authority.

 **I see this too** 1

 **Team access** +

Status and category

Open and Resolved are visible in text and on the map. Auto-classified marks model-assigned type or service.

Suggested service

The app proposes one directory entry from the report details. An uncertain match goes to General enquiries for review. Use Official contact page to contact an authority yourself.

Severity

When shown, a low, medium, high or critical estimate includes factors and a suggested response window. This is advisory, not an official promise.

Linked reports

Reports about the same physical issue can be linked, with each citizen's original report retained. Possible matches can await moderator confirmation.

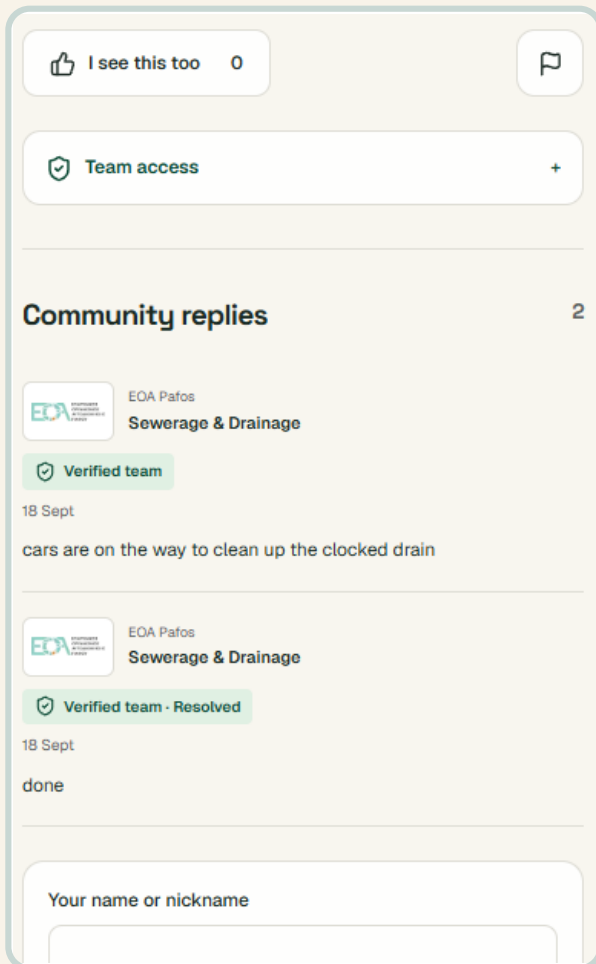

No automatic dispatch

Publishing on FixPafos does not send an official request to a municipality or service. The official contact link is provided for direct contact.

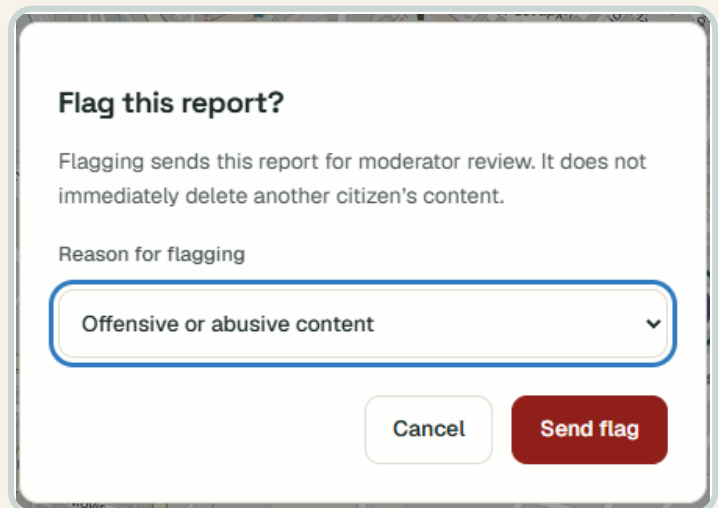

Example public issue detail. The suggestion shown here asks for human routing review.

Support, reply or flag

Open an issue first. Community actions are visible alongside any verified service updates.

Community replies can include a Verified team badge.

The flag dialog records a reason for moderation review.

1 Support

Select I see this too to add your support; select Supported to remove it. The count is shown on the card and detail.

2 Reply

Enter your public name or nickname and an update, then select Post reply. Replies are checked before publication.

3 Flag

Use the flag icon, choose a reason and select Send flag. Each person can flag a report once. Flags request review; enough distinct flags temporarily hide it until a moderator decides.

Find who may be responsible

Use Local services from the top navigation to read each team's remit and open its official contact page.

KNOW WHO TO CONTACT

Local services.

Find the team that looks after your neighbourhood.

Reports receive a suggested service. For an official request, contact the authority directly.

Pafos Municipality

Technical Services

Municipal roads, potholes, pavements, accessibility, public infrastructure and municipal street lighting. Major highways may need referral to Public Works.

[Official contact page](#) ↗

EOA Pafos

Sewerage & Drainage

Public sewer blockages, sewage leaks, wastewater and stormwater network faults.

[Official contact page](#) ↗

EOA Pafos

Water Supply

Public water supply leaks, interrupted supply and water network faults.

The directory shows official parent-authority logos and links.

Technical Services

Municipal roads, pavements, infrastructure and lighting.

Sewerage & Drainage

Public sewage, wastewater and stormwater faults.

Water Supply

Public water network leaks and interruptions.

Cleaning Service

Bins, litter, dumping and street cleaning.

Green Service

Parks, trees and municipal green spaces.

Traffic Service

Parking and local traffic concerns.

Health Service

Hygiene, pests and other sanitation concerns.

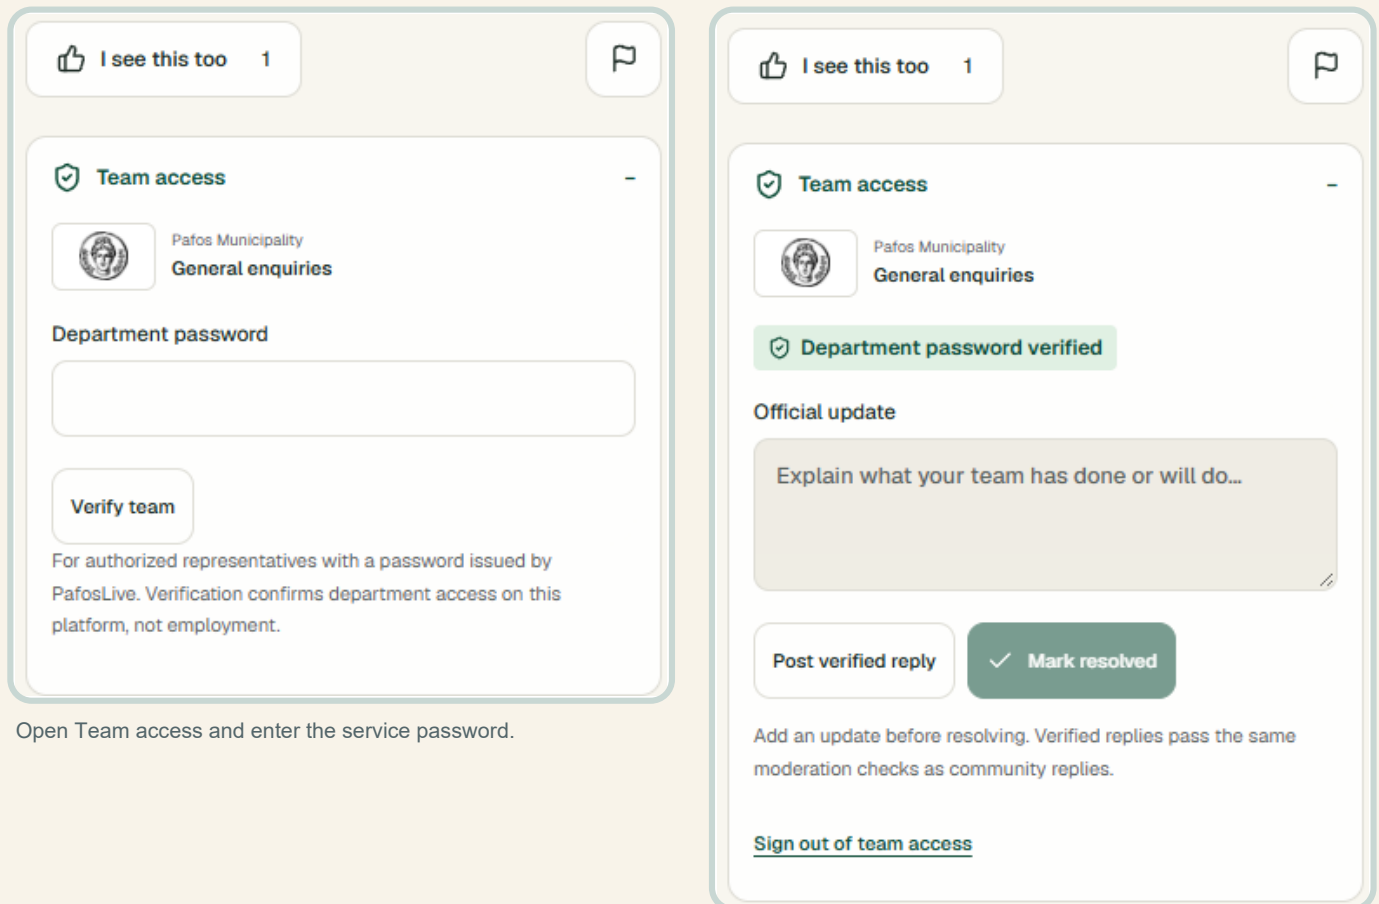

General enquiries

Unclear or mixed issues needing human routing.

The directory is a routing aid, not a complete map of government responsibility. Official logos identify parent authorities; they do not imply endorsement.

Verify, update and resolve

Authorized representatives use the password for the issue's assigned service. This is separate from the moderator password.

The image displays two side-by-side screenshots of the FixPafos user interface, specifically the 'Team access' panel for 'Pafos Municipality General enquiries'.
The left screenshot shows the initial state where the 'Department password' field is empty and the 'Verify team' button is visible. Below the button, a note states: 'For authorized representatives with a password issued by PafosLive. Verification confirms department access on this platform, not employment.'
The right screenshot shows the state after verification. A green banner at the top of the panel reads 'Department password verified'. Below this, there is an 'Official update' section with a text area containing the placeholder 'Explain what your team has done or will do...'. At the bottom of the panel, two buttons are visible: 'Post verified reply' and 'Mark resolved' (which has a checkmark icon). A note below these buttons states: 'Add an update before resolving. Verified replies pass the same moderation checks as community replies.' At the very bottom, there is a link that says 'Sign out of team access'.

Open Team access and enter the service password.

Verified access reveals official update and resolve controls.

1 Open Team access

On the assigned issue, expand the Team access panel and select Verify team after entering the password.

2 Post a verified reply

Write an Official update and select Post verified reply. The public reply carries a Verified team badge after text moderation.

3 Mark resolved

Write an update describing the outcome, then select Mark resolved. The resolution and verified update appear together; the pin changes to a check.

Only the assigned service can use these controls for an issue. Sign out of team access when finished. The badge confirms platform password access, not independent proof of employment.

Review the queues

Open Moderation from the board footer, enter the separate moderation password and select Open quarantine.

Moderation quarantine

Review submissions blocked by the profanity filter or the model. Approved items are published to the shared community board.

2 awaiting review

Refresh

Lock

Export CSV

Department

All departments

Export CSV

Department digest

Not sent to the authority.

Flagged reports

No flagged reports.

Suggested duplicates

No pending clustering suggestions.

Photo review

Clearly relevant, safe photos are approved automatically. Uncertain, irrelevant, inappropriate or privacy-sensitive photos and failed automatic checks stay private here, with pending reviews first. Check the image before approving. Photos only become public when their report is also published.

Authorized view: export, flagged reports, suggested duplicates and photo review. Counts change as people report.

Quarantine: inspect text reports and replies blocked by the filter or model; Approve & publish releases an item. Leave unsuitable submissions blocked.

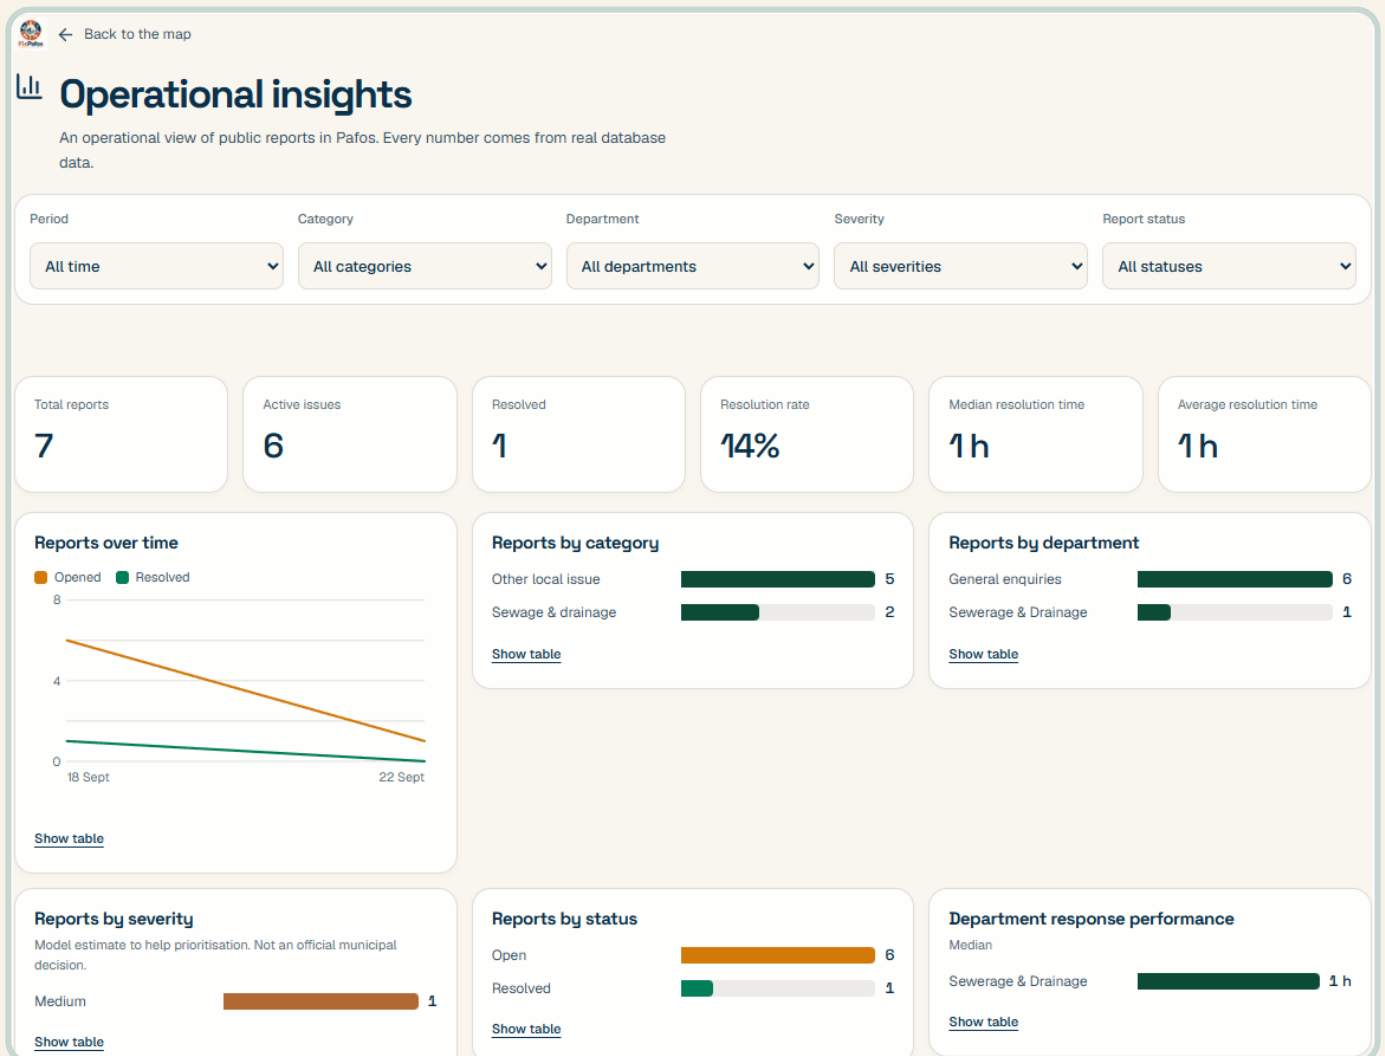

Flagged reports: review the reason and report, then Restore to board or Hide permanently. Suggested duplicates: Confirm link or Separate.

Photo review: use View private photo, read the AI assessment, then Approve photo or Reject photo. Pending images stay private. A moderator can also overturn an earlier auto-approval.

Exports: choose All departments and select Export CSV, or select a service for CSV or Department digest. The file downloads locally; FixPafos does not email it. Use Refresh for new items and Lock when done.

Read the operational dashboard

Open Insights from the board footer to view Operational insights. Figures come from stored public reports; hidden reports are excluded.

Live dashboard: five filters, six summary figures and charts. Values are a snapshot, not targets.

Filters: choose All time, 30 days, 90 days or last year, then narrow by category, assigned department, severity and open/resolved status. Results update on the same page.

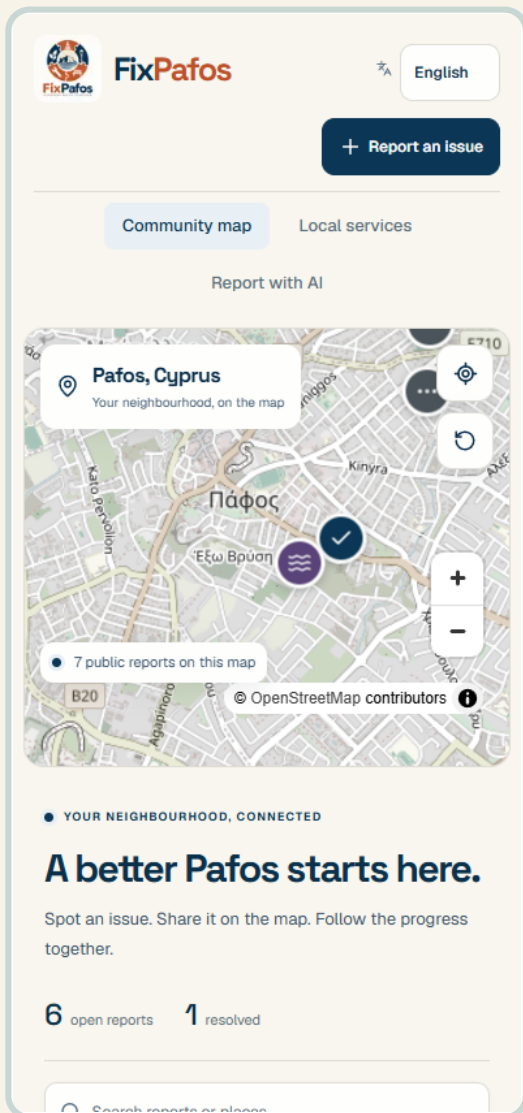

Summary: total, active and resolved reports, resolution rate, median resolution time and average resolution time. An unavailable measure is shown as unavailable rather than invented.

Charts: opened/resolved over time; breakdowns by category, department, severity and status; service response performance; hotspots; recurring locations; duplicate cluster sizes; seasonal patterns.

Select Show table on any chart for its data table. Empty panels explicitly say when there is not enough data.

Use FixPafos on mobile

The map leads and the board follows below it. The same reporting, reading and service tools remain available.

Live 390-pixel mobile viewport.

Navigate

Scroll from the map to the report list. Use Report an issue, Community map, Local services or the experimental Report with AI link.

Choose a location

Pan and zoom with touch. While reporting, tap the exact spot or choose Use map centre.

Languages

Switch between Greek, English and Russian at the top. The app keeps original citizen wording intact.

Accessibility

Keyboard users can use Skip to content and the text list instead of map pins. Controls have labels and visible focus. Insights charts offer tables.

Installable and offline

Where supported, add the site to your home screen. Failed submissions from the standard form appear in the local queue. Experimental chat needs the internet and keeps an unfinished draft only in page memory.

Check connection

If tiles or reports do not load, restore connectivity, reload the page or select Refresh reports. A queued draft is not a published report.

What happens after Publish

The platform checks each submission before it reaches the shared public board.

1 Text safety

Report and reply text is checked. Blocked content goes to moderation; a provider failure stops publication.

2 Classification and routing

The app assigns a category, suggests one service and may add an advisory severity. Low-confidence routing asks for human review.

3 Duplicate check

Nearby related reports can be linked. Each person's report remains separate. Ambiguous matches wait for a moderator.

4 Photo check

Clear, relevant, safe photos may be approved automatically. Other images stay private until a moderator decides.

5 Public progress

Published issues appear on the map and list. Residents support or reply; the assigned service can add a verified update and mark resolved.

Need an official response?

Use the report's Official contact page or the Local services directory to contact the relevant authority directly. FixPafos does not dispatch the report for you.

ISSUE TYPES

Roads & pavements; sewage & drainage; water supply; waste & cleaning; street lighting; parks & green spaces; traffic & parking; other local issue. Choose I am not sure to have the type classified automatically.

ADVISORY RESPONSE WINDOWS

Critical: within 4 hours. High: within 2 working days. Medium: within 10 working days. Low: within 30 working days. These are suggested priorities, not authority commitments.

USEFUL ADDRESSES

Community map <https://fixpafos.vercel.app/>

Experimental chat <https://fixpafos.vercel.app/report/chat>

Insights <https://fixpafos.vercel.app/insights>

Moderation <https://fixpafos.vercel.app/moderation>

Screenshots were captured from the live app on 28-29 September 2026; the new chat and navigation captures are from 29 September. Report counts change. The FixPafos logo was AI-generated and is used unchanged; it does not imply endorsement. Map data: © OpenStreetMap contributors. Sample photo: 'Marked Pothole.jpg' by Prosthetic Head, cropped/resized, CC BY-SA 4.0: https://commons.wikimedia.org/wiki/File:Marked_Pothole.jpg (license: <https://creativecommons.org/licenses/by-sa/4.0/>). Chat text, photo and map pin illustrate an unsubmitted draft. No public report or moderation decision was created for this manual.

How we utilized AI

AI helps interpret multilingual, messy civic reports; fixed rules and people set the limits on what it may decide.

Why use AI here?

The same civic issue can be described in Greek, Greeklish, English or Russian. DeepSeek helps gather missing context, interpret meaning, suggest a service and compare evidence. Fixed choices and human review constrain these uses.

IN THE LIVE REPORTING FLOW

1 Ask and draft - experimental

Using the same DeepSeek API, the chatbot asks follow-ups about the issue and prepares an editable draft of up to 500 characters. Camera, voice and GPS controls guide evidence collection. The user reviews and submits.

2 Moderate words

DeepSeek screens report and reply text before publication. Blocked content reaches a human queue; provider errors stop publication.

3 Classify and suggest

It assigns a category and suggests one of eight services, with advisory severity and reasons. Unclear responsibility goes to review.

4 Assess the photo

After submission, vision review compares image and report. Only relevant, safe, high-confidence images without personal information auto-approve; others stay private.

5 Check for duplicates

SQL and lexical checks shortlist nearby, recent reports. DeepSeek compares their meaning. Uncertain links wait for a moderator, with each original report retained.

CONTROLS, EVIDENCE AND LIMITS

Humans remain accountable

AI drafts are labelled and editable. Moderators review blocked text, private photos, flags and uncertain duplicates. Routing is a suggestion, not dispatch.

Evidence, without invented scores

The 120-case dataset measures routing and severity, not chatbot quality. Chat validation and browser-flow checks cover device controls, errors and reviewed submission; no conversational accuracy figure is claimed.

Data boundary

Draft conversation and sent voice transcript go to DeepSeek; raw recordings stay on the page. Browser speech services may process audio. Photos reach AI review after submission. Retention and provider/legal review remain open work before official adoption.

How we used AI: Claude and OpenAI Codex assisted our code and documentation; our logo is AI-generated. DeepSeek powers conversational drafting and the existing assessment pipeline. We remain responsible for this submission.

Technology and moderation

The live service combines a public map, private review queues and department-scoped staff actions.

DEPLOYED STACK

Web and hosting

Next.js 16 App Router, React 19, TypeScript 6 and Node.js 24 on Vercel; server APIs run as Vercel Functions.

Map and data

MapLibre GL JS 6 and OpenStreetMap tiles; Neon PostgreSQL through Vercel Marketplace stores reports, replies, review records and rate limits.

Photo storage

Sharp 0.35 re-encodes uploads and strips EXIF/GPS. Private Vercel Blob holds photos; only approved, visible photos are served publicly.

AI and routing

DeepSeek via its Anthropic-compatible API and @anthropic-ai/sdk 0.110. The experimental chat uses the same client for follow-ups and draft text; submitted reports receive classification, service, severity and duplicate assessment.

Phone and access

Camera capture, MediaRecorder playback, browser SpeechRecognition, explicit GPS/map selection and accessible insight tables. IndexedDB queues only standard-form reports; chat is online and keeps drafts in page memory.

Quality checks

TypeScript tests with tsx, Playwright browser checks, ESLint and a labelled multilingual AI evaluation dataset.

MODERATION AND VERIFICATION

1 Screen text

DeepSeek reviews report and reply text before publication. Blocked text enters quarantine; if the model is unavailable, publication stops.

2 Check photos

Vision review auto-approves only relevant, safe, high-confidence images without visible personal information. All others remain private for a moderator.

3 Escalate to people

Moderators inspect photo and blocked-text queues, flagged reports and uncertain duplicate links. They can approve, restore, hide or separate as appropriate.

4 Verify service responses

A password authenticates the assigned service team. Its reply gets a Verified badge, and only that team can mark its report resolved.

Independent civic platform

Routing and severity are advisory. FixPafos does not automatically send reports to a municipality or guarantee an official response.

Stack and workflows checked against source and package.json on 29 September 2026. Live at <https://fixpafos.vercel.app>; experimental chat: [/report/chat](https://fixpafos.vercel.app/report/chat).
